

Screen Casting Project

The purpose of this project is to familiarize students with screen casting and how screen casts can be used to maximize accessibility of presentations and informational materials.

For this project we will use our PowerPoint Presentations as a starting point. You should plan to:

Capture the presentation of your PowerPoint Project by viewing your PowerPoint in “Slide Show” mode combined with one or both of the following:

- Voice Over: Record your explanation / verbal presentation during the recording of your slide show as if you were giving the presentation in the classroom.
- Detailed Annotation: Add callouts, arrows, text boxes, highlights, and other markup to draw attention to the topics / illustrations as you discuss them.

Your screen cast should be approximately 5 minutes in length. If you plan to use Jing to create your screen cast, it will not allow you to create a screen capture video longer than 5 minutes.

If you plan to annotate your presentation rather than record your voice, you will need to download a free trial of Camtasia Studio to add the annotations to your Jing screen cast.
